DRUG TOXICITY DEATHS Saskatchewan, 2016 to 2023

(Confirmed Drug Toxicity Deaths Updated – January 31, 2023)

(Suspected Drug Toxicity Deaths Updated – January 31, 2023)

The data in the following tables include all death investigations concluded by the Saskatchewan Coroners Service (SCS) between January 1, 2016 and January 31, 2023 where the cause of death was due to a Drug Toxicity (Single or Combined Drug Toxicity). The statistics shown are subject to change as new investigations are undertaken and/or on-going investigations are concluded.

For the following tables please note:

- 'Undetermined' indicates that after completing an investigation, there is equal evidence, or a significant contest between one or more classifications.
- The statistics for 2021, 2022 and 2023 are preliminary given that not all death investigations for these years have been concluded.
- There is 1 death waiting to go to inquest in 2019 and 2 deaths waiting to go to inquest in 2020 where the cause of death is likely to be from a drug toxicity (single or combined). However, this number will not be reflected in the tables until the inquests have been held and the juries make their findings.
- All statistics in these tables have been confirmed drug toxicity deaths with the exception of the table "Suspected Drug Toxicity Deaths, January 1, 2021 to December 31, 2021", "Suspected Drug Toxicity Deaths, January 1, 2023 to January 31, 2023". At the time of this printing, the statistics in this particular table are preliminary data and may change once the cases have been concluded.

Suspected Drug	Toxici	ty Deaths, January 1, 2021 to December 31, 2021
Total	9*	
Suspected Drug	Toxici	ty Deaths, January 1, 2022 to December 31, 2022
Total	194*	
Suspected Drug	Toxici	ty Deaths, January 1, 2023 to January 31, 2023
Total	55*	

^{*}At the time of this printing, this is preliminary data and these numbers are SUSPECTED drug deaths. These numbers may change once the cases have been concluded.

^{*}To provide an aggregate number for 2021, please add the Suspected Drug Toxicity Deaths to the 2021 Confirmed Drug Toxicity Deaths shown above. To provide an aggregate number for 2022, please add the Suspected Drug Toxicity Deaths to the 2022 Confirmed Drug Toxicity Deaths shown above. To provide an aggregate number for 2023, please add the Suspected Drug Toxicity Deaths to the 2023 Confirmed Drug Toxicity Deaths shown above.

^{*} Illicit Drugs Containing W-18 – As part of a 2015 investigation into the combined drug toxicity death of a male, age 25, there were tablets found at the scene which were analyzed and found to contain fentanyl and W-18. Given the limitations of toxicology testing, it is not possible to quantify W-18 beneath a certain level within a person's blood. The Saskatchewan Coroners Service was unable to determine whether W-18 contributed to this individual's death. Also, based on the circumstances of the death, it could not be confirmed whether the deceased ingested any of the tablets that contained the fentanyl and W-18. The individual's cause of death was combined drug toxicity involving a number of drugs including fentanyl and morphine which are reflected in the statistics contained in the tables of this report.
